

SWIGGY ANALYTICS DASHBOARD PROJECT

Data Analysis using Excel, Power BI & Python

Tools Used:

- Excel
- Power BI
- Python
- Jupyter Notebook

Date:

2026

TABLE OF CONTENTS

1. Introduction
2. Project Objectives
3. Dataset Information
4. Tools & Technologies
5. Data Cleaning Process
6. Excel Analysis
7. Power BI Dashboard
8. Python Analysis
9. Key Insights
10. Business Recommendations
11. Conclusion
12. Future Improvements

1. INTRODUCTION

Swiggy is one of India's largest online food delivery platforms.

This project analyzes restaurant and customer order data using Excel, Power BI, and Python.

The analysis helps understand:

- Restaurant performance
 - Customer ordering behavior
 - Pricing trends
 - Rating distribution
 - Monthly order trends
-

2. PROJECT OBJECTIVES

- Analyze restaurant data across multiple cities
 - Understand customer order trends
 - Measure restaurant rating performance
 - Visualize pricing distribution
 - Create interactive dashboards
 - Generate business insights
-

3. DATASET INFORMATION

Dataset contains:

- Restaurant Names
- Cities
- Categories
- Ratings
- Price Information
- Orders
- Monthly Trends

Dataset Size:

- Total Restaurants: 984
- Total Orders: 197K

- Cities Covered: 28
-

4. TOOLS & TECHNOLOGIES

Tool	Purpose
Excel	Data Cleaning
Power BI	Dashboard Creation
Python	Data Analysis
Jupyter Notebook	Visualization
GitHub	Project Hosting

5. DATA CLEANING PROCESS

The dataset was cleaned using:

- Removing null values
 - Handling duplicate records
 - Formatting columns
 - Correcting data types
 - Filtering invalid values
-

6. EXCEL ANALYSIS

Excel was used for:

- KPI Analysis
- Data Cleaning
- Price Analysis
- Order Trend Analysis

KPI Metrics:

- Average Rating: 4.17

- Average Price: ₹268.51
 - Total Orders: 197K
-

7. POWER BI DASHBOARD

The Power BI dashboard includes:

- Restaurant Performance Analysis
- Rating Distribution
- Price Distribution
- Monthly Order Trends
- City-wise Restaurant Analysis
- Category-wise Analysis

Dashboard Features:

- Interactive Filters
 - Dynamic Charts
 - KPI Cards
 - Visual Insights
-

8. PYTHON ANALYSIS

Python analysis includes:

- Exploratory Data Analysis (EDA)
- Data Visualization
- Trend Analysis
- Statistical Insights

Python Libraries Used:

- Pandas
- NumPy
- Matplotlib

9. KEY INSIGHTS

- Bengaluru has highest restaurant count
- Most orders fall between ₹200–₹500
- McDonald's and KFC have highest orders
- Recommended category dominates
- Ratings are mostly above 4.0

10. BUSINESS RECOMMENDATIONS

- Increase restaurant promotions in high-demand cities
- Improve low-rated restaurant services
- Focus on mid-price range customers
- Expand recommended category restaurants

11. CONCLUSION

This project successfully analyzed Swiggy restaurant and order data using Excel, Power BI, and Python.

The dashboard provides meaningful business insights that can help improve customer experience and restaurant performance.

12. FUTURE IMPROVEMENTS

- Real-time dashboard integration
- Customer sentiment analysis
- Machine learning prediction
- Web-based analytics dashboard
